Employee Qualification & Certification

We assure the right technician with the proper qualifications meet your expectations.

Often times it can be very difficult to ensure a potential candidate has all the qualifications and experience required to not only perform his job, but to do so at a high skill level.

Allow our experienced consultants to alleviate this headache.

We will review your potential employees qualifications and determine not only if they meet the requirements of your written practice but also inform you of any possible limitations of the individual in the NDT method in which they are being considered.

This will not only save time but also potential headaches down the road.

Reliable ASNT Level III Support

Experienced and Reachable

One common problem NDT companies have in common is not having a Level III that is reachable or that can provide immediate and accurate solutions to problems when they occur.

In addition, one of the biggest battles technicians face in the field is not having reliable support from an experienced seasoned inspector that can physically instruct them on how to apply a technique.

This is what separates us from our competitors, we ensure that both NDT operations and the NDT field technicians receive the support they need in a timely manner.

“Providing Dependability and Support”

Qualification of Employees

Ensuring your technician meets all the requirements of your written practice can be stressful. Between the acquisition, validation, and documentation of these employees it can be extremely time consuming. Allow our ASNT NDT Level III's to alleviate that Burden.

Certification of Employees

We will develop and administer the General, Specific, and Practical Examinations as required for your technicians to certify as Level II's or Level III's in accordance to your written practice.

NDE CLASSROOM TRAINING SERVICES

Here at Refined, we understand an inspector as only as good as the training he or she receives. This is why we also offer classroom training services that are created by an ASNT Level III Technicians who have had the advantage of being in the field. We discuss theory and how to apply it in real world application.

CUSTOM NDE PROCEDURES & GAP ANALYSIS

With the construction codes constantly being revised, documentation is essential. Unfortunately personnel are often spread thin and revisions to procedures are left to the wayside.

Our experts will review or revise your existing procedures and forms to assure they meet the current requirements. Additionally, we will discuss some potential reduction in operating costs by making you aware of available alternative NDE methods that will give you the same or better results.

"Committed To The Education & Growth of Inspectors"

Auditing of NDT Systems

At some point you will need to audit the effectiveness of your NDT Program. This includes not only identification of potential short comings but also corrective action responses to assure these items do not continue to occur.

You want to ensure you have selected the right company who knows what to look for and how to correct it without the solution breaking the bank.

At Refined, we understand every second is important.

It is this understanding, that separates Refined Inspection Services from our competitors. We pride ourselves in providing prompt and accurate solutions.
